

# Electric Utility Operations

Reach a unique audience with *T&D World's* special demographic option

This monthly special section in *Transmission & Distribution World* magazine is circulated to electric utility personnel working in the field, in construction, operations and maintenance.

In Electric Utility Operations, our field editor, Amy Fischbach, focuses the content exclusively on reports from the field, addressing relevant topics such as hand tools, pole line and underground hardware and equipment; case studies on using pullers, aerial lift equipment, digger and bucket trucks and testing devices.

In this section, field personnel are both our primary readers and our primary source for feature stories and case studies. They also provide valuable feedback on the quality and reliability of the materials, equipment and tools used in the field. Field operations personnel represent a significant purchasing and end-user group for products and services in the electric utility industry.
